Wood_Turtle_Report.Rmd

Julia Sirois

11/19/2022

Introduction

The goal of this project is to analyze telemetry data collected over the 2022 field season on six wood turtles (3 males and 3 females) in order to look for patterns and differences between their home ranges. There are three relationships I am curious to explore. The first relationship being explored is MCP home range area of males vs the MCP area of females. I hypothesize that male wood turtles will occupy a larger home range than female turtles do.

Why? What is different about their biology that might explain why males use more space?

The second relationship I am going to look at is the whether the home range of each individual is concentrated in a certain area or if there is a lot of variability in the home ranges.

I'm not sure I understand this one. Is this the clusthr? If so, how do you quantify it?

The third relationship I am looking at is the difference between how far away from the stream male turtles occupy compared to how far away female turtles occupy. I believe that female turtles will occupy areas further away from the stream than male turtles.

Why should females be further from the stream than males? Does time of year matter?

In the book Biology and Conservation of the Wood Turtle, Chapter 6: Spatial Ecology and Seasonal Behavior discusses previous examinations of home ranges with the results finding that male wood turtles had larger home ranges but whether it was significant varied between studies. This chapter also mentions that male wood turtles spend more time in streams than female turtles do during the active season and females generally move greater distances from the stream than males do.

Good, but maybe intergrate these findings right into your hyptotheses. Also, we need a formal citation of the book (maybe at the end of the document.)

Getting Started

```
rm(list = ls())
library(tidyverse)
```

```
## -- Attaching packages --------------------------------------- tidyverse 1.3.1 --
## v ggplot2 3.4.0      v purrr   0.3.5
## v tibble  3.1.8      v dplyr   1.0.10
## v tidyr   1.2.1      v stringr 1.4.1
## v readr   2.0.1      v forcats 0.5.1
## -- Conflicts ------------------------------------------ tidyverse_conflicts() --
## x dplyr::filter() masks stats::filter()
## x dplyr::lag()    masks stats::lag()
```

```
library(ggfortify)
library(here)
```

```
## here() starts at /home/jesiro19/Biostats/CapDAP_Turtles
```

```
library(rgdal)
```

```
## Loading required package: sp
```

```
## rgdal: version: 1.5-23, (SVN revision 1121)
## Geospatial Data Abstraction Library extensions to R successfully loaded
## Loaded GDAL runtime: GDAL 3.0.4, released 2020/01/28
## Path to GDAL shared files: /usr/share/gdal
## GDAL binary built with GEOS: TRUE
## Loaded PROJ runtime: Rel. 7.0.0, March 1st, 2020, [PJ_VERSION: 700]
## Path to PROJ shared files: /home/jesiro19/.local/share/proj:/usr/share/proj
## PROJ CDN enabled: FALSE
## Linking to sp version:1.4-5
## To mute warnings of possible GDAL/OSR exportToProj4() degradation,
## use options("rgdal_show_exportToProj4_warnings"="none") before loading rgdal.
```

```
library(adehabitatHR)
```

```
## Loading required package: deldir
```

```
## deldir 0.2-10      Nickname: "Morpheus and Euripides"
```

```
##
##      Note 1: As of version 0.2-1, error handling in this
##      package was amended to conform to the usual R protocol.
##      The deldir() function now actually throws an error
##      when one occurs, rather than displaying an error number
##      and returning a NULL.
##
##      Note 2:  As of version 0.1-29 the arguments "col"
##      and "lty" of plot.deldir() had their names changed to
##      "cmpnt_col" and "cmpnt_lty" respectively basically
##      to allow "col" and and "lty" to be passed as "..."
##      arguments.
##
##      Note 3: As of version 0.1-29 the "plotit" argument
##      of deldir() was changed to (simply) "plot".
##
##      See the help for deldir() and plot.deldir().
```

```
## Loading required package: ade4
```

```
## Loading required package: adehabitatMA

##     id
```

Analyses

Pull in data

```
turtles <- read.csv(here("Data", "updated_turtle_locations.csv"))
```

Question 1 Are the home ranges of male wood turtles larger than the home ranges of female wood turtles?

Create a subset consisting of the Turtle IDs, Lats and Longs.

```
turtles.sp <- turtles [c("Turtle_ID", "Latitude", "Longitude")]
```

R is reading the Lats and Longs as numeric data and needs to be told that those columns represent spacial data.

```
library(sp)
coordinates(turtles.sp)<- c("Longitude", "Latitude")
proj4string(turtles.sp)<-CRS("+proj=longlat +datum=WGS84") #sets projection
```

Now convert the spatial coordinates into UTM so the measurements are in meters and not degrees.

```
utm_sp <-spTransform(turtles.sp, CRS("+proj=utm +zone=19 ellps=WGS84")) #reprojects to UTM
```

```
## Warning in showSRID(uprojargs, format = "PROJ", multiline = "NO", prefer_proj
## = prefer_proj): Discarded datum Unknown based on WGS84 ellipsoid in Proj4
## definition
```

```
utm_sp
```

```

```

```
turtles_mcp <- mcp(utm_sp, percent = 100)
```

```
## Warning in proj4string(xy): CRS object has comment, which is lost in output
```

```
## Warning in showSRID(uprojargs, format = "PROJ", multiline = "NO", prefer_proj
## = prefer_proj): Discarded datum Unknown based on WGS84 ellipsoid in Proj4
## definition
```

```
turtles_mcp
```

```
## Object of class "SpatialPolygonsDataFrame" (package sp):
##
## Number of SpatialPolygons:  6
```

```
##
## Variables measured:
##        id      area
## L1R2 L1R2  5.002082
## L1R4 L1R4 22.510516
## L3R1 L3R1 43.528142
## L3R3 L3R3  5.874254
## L3R9 L3R9  9.354094
## L9R0 L9R0 15.451445
```

There should be 6 spatial polygons.. not sure what is wrong Ok - I wonder if there is a package conflict? One thing you could do is just refer to getting the mcps from your other code (reference the other file and write them from that file) and then just import them here, already "cooked".

Plot the MCPs

```
plot(utm_sp, col = as.factor(utm_sp@data$Turtle_ID), pch = 16)
plot(turtles_mcp, col = alpha(1:30, 0.5), add = TRUE)
```

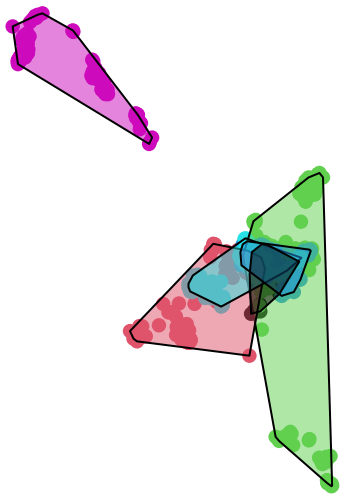

Figure 1: Figure 1. A delightful dog named Gus

It will be cool to add a figure legend to this telling us what we're looking at.

Calculate the MCP areas

```
areas <- mcp.area(utm_sp, percent = seq(50, 100, by = 5))
```

```

```

Save the 'areas' subset and import it to add the percentages as a variable.

```
write.csv(areas, here("Data", "turtle_areas.csv"))
```

Import the csv

```
turtle_areas <- read.csv(here("Data", "turtle_areas.csv"))
```

Statistical Analysis Preparation

```
areas_long <- pivot_longer(turtle_areas, cols = L1R2:L9R0, names_to = "Turtle_ID", values_to = "Area") 
areas_long
```

```
## # A tibble: 66 x 3
##        X Turtle_ID  Area
##    <int> <chr>     <dbl>

## # ... with 56 more rows
```

Now let's rename the 'X' column

```
colnames(areas_long) <- c("Area_percentage", "Turtle_ID", "Area")
```

The sex of each turtle is important moving forward. Let's add a column with the appropriate sex for each individual.

```
Turtle_sex <- data.frame(Turtle_sex = c('male', 'female', 'male', 'female', 'female', 'male')) #creates
areas_new <- cbind(areas_long, Turtle_sex) #merges the two dataframes
areas_new
```

```
##    Area_percentage Turtle_ID       Area Turtle_sex

## 66             100      L9R0 15.4514453       male
```

The male turtles are L1R2, L3R1 and L9R0 The female turtles are L1R4, L3R3 and L3R9

Let's separate the areas by the sex of the turtles

```
male_areas <- filter(areas_new, Turtle_ID == "L1R2" | Turtle_ID == "L3R1"| Turtle_ID == "L9R0")
```

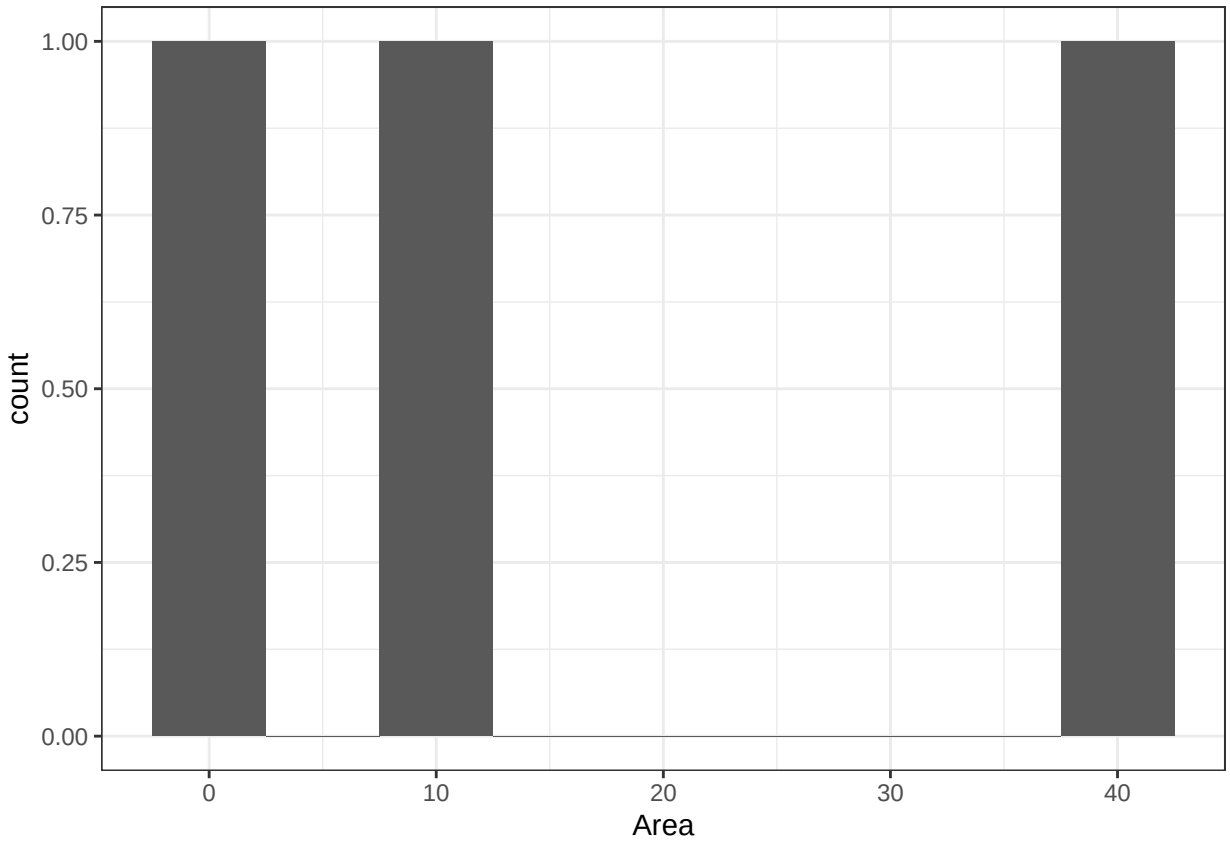
Repeat with the female turtles

```
female_areas <- filter(areas_new, Turtle_ID == "L1R4" | Turtle_ID == "L3R3"| Turtle_ID == "L3R9")
```

Analysis

Visualize the data

```
male_areas_95 <- filter(male_areas, Area_percentage == "95")
ggplot(male_areas_95, aes(Area)) + geom_histogram(binwidth = 5) + theme_bw()
```



```
summary(male_areas_95)
```

```

```

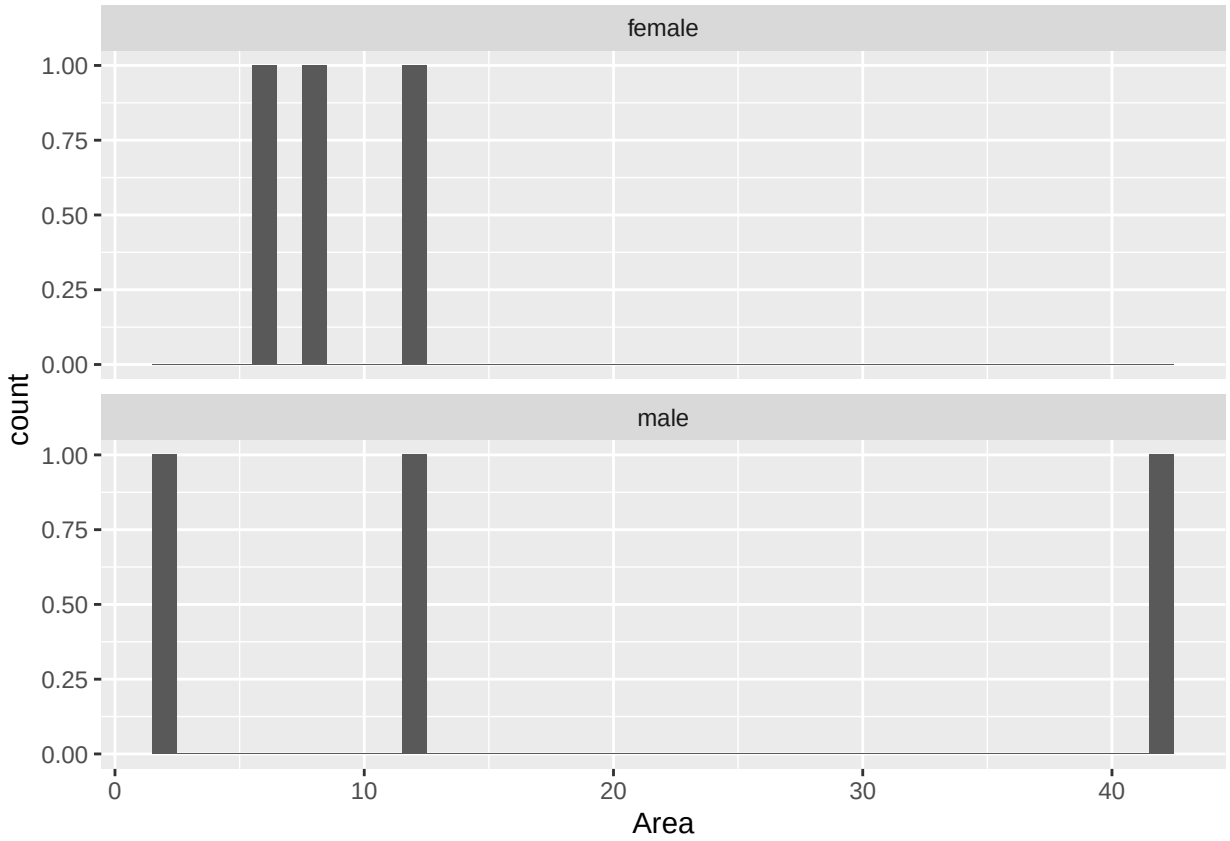
Filter the data so that the only home range area is 95%

```
areas_test <- filter(areas_new, Area_percentage == 95)
```

I'd like to compare the home range size of males vs females. Let's use a t-test

Check out the home ranges of each sex using histograms and the facet_wrap() function.

```
ggplot(areas_test, aes(x = Area)) +
  geom_histogram(binwidth = 1) +
  facet_wrap(~Turtle_sex, ncol = 1) #generates two histograms +
```



```
  theme_bw()
```

```

```

Complete a t-test

```
ttest_MCP <- t.test(Area ~ Turtle_sex, data = areas_test)
ttest_MCP
```

```
##
##  Welch Two Sample t-test
##
## data:  Area by Turtle_sex
## t = -0.84688, df = 2.092, p-value = 0.4828
## alternative hypothesis: true difference in means between group female and group male is not equal to
## 95 percent confidence interval:
##  -59.77966  39.42006
## sample estimates:
## mean in group female   mean in group male
##             8.656686            18.836488
```

Results

There is no significant difference between the home range sizes of male and female turtles in this sample p = 0.4756

Question 2 Do individuals have consistent home range sizes or are they greatly variable?

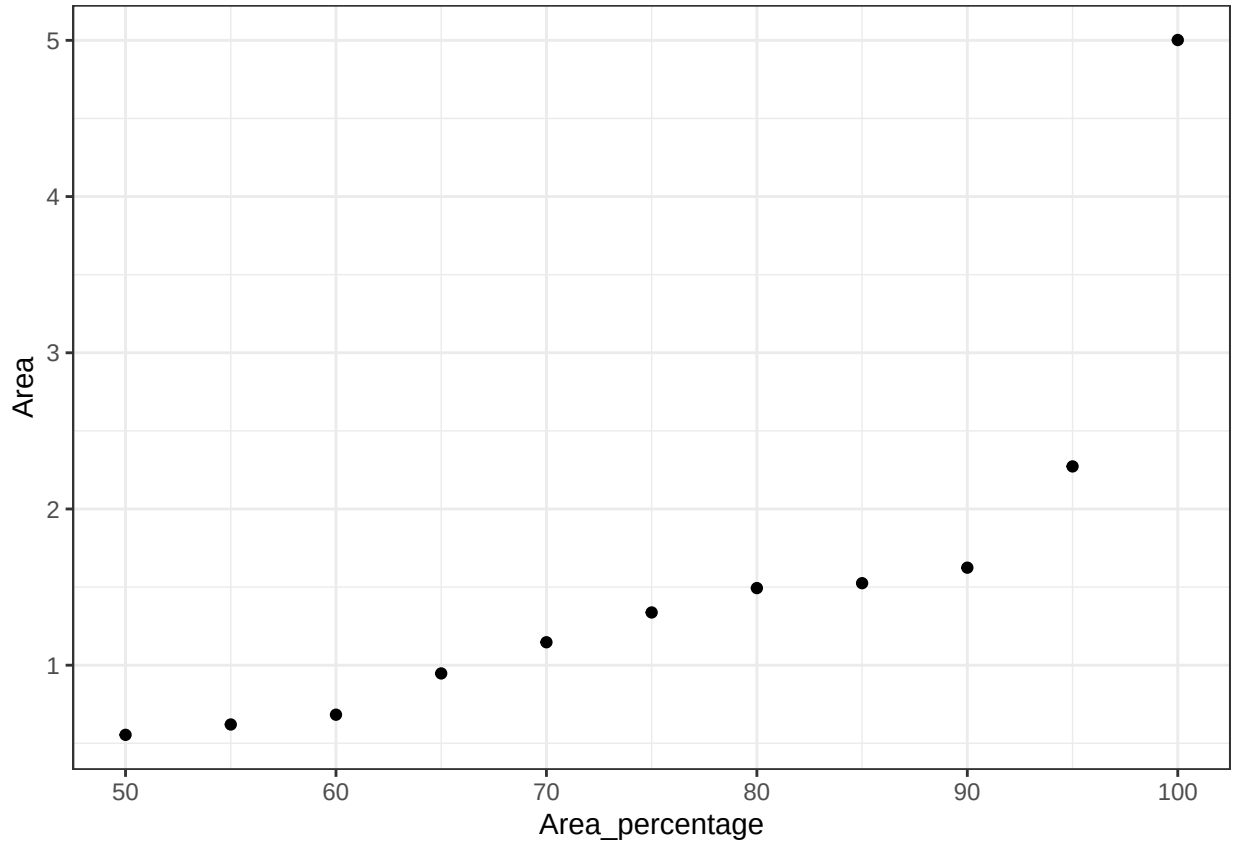
Generate subsets for each individual

```
L1R2 <- filter(areas_new, Turtle_ID == 'L1R2')
L1R4 <- filter(areas_new, Turtle_ID == 'L1R4')
L3R1 <- filter(areas_new, Turtle_ID == 'L3R1')
L3R3 <- filter(areas_new, Turtle_ID == 'L3R3')
L3R9 <- filter(areas_new, Turtle_ID == 'L3R9')
L9R0 <- filter(areas_new, Turtle_ID == 'L9R0')
```

Plot the relationships

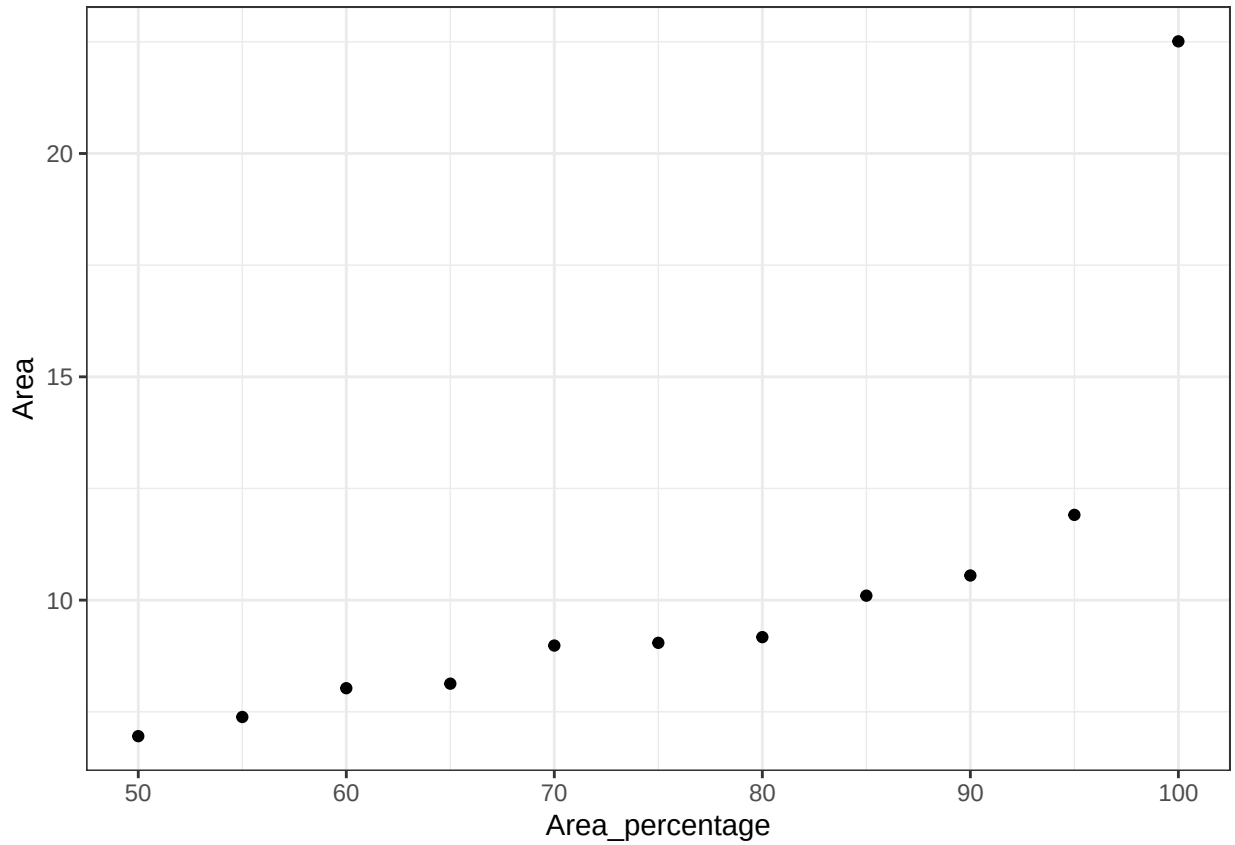
L1R2:

```
ggplot2::ggplot(L1R2, aes(Area_percentage, Area)) +
         geom_point() +
         theme_bw()
```



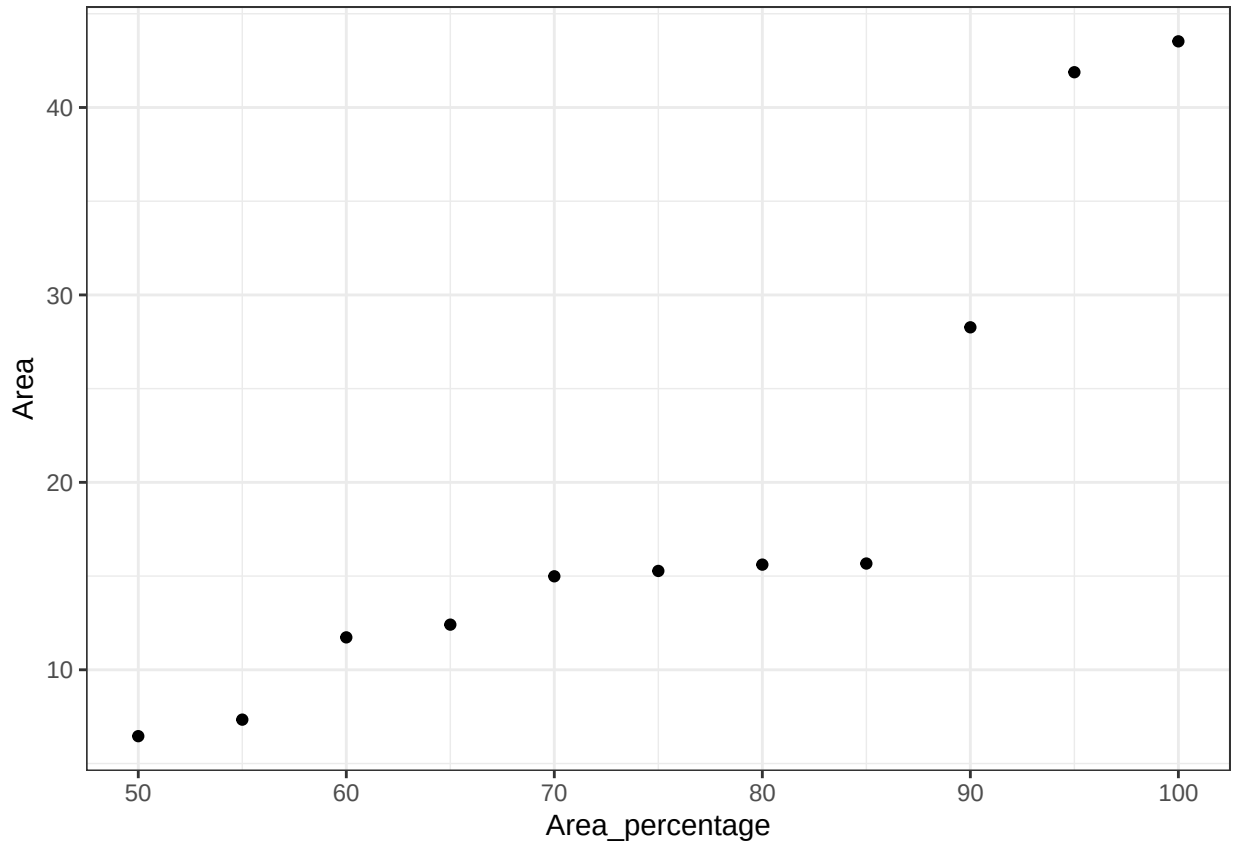
L1R4:

```
ggplot2::ggplot(L1R4, aes(Area_percentage, Area)) +
         geom_point() +
         theme_bw()
```



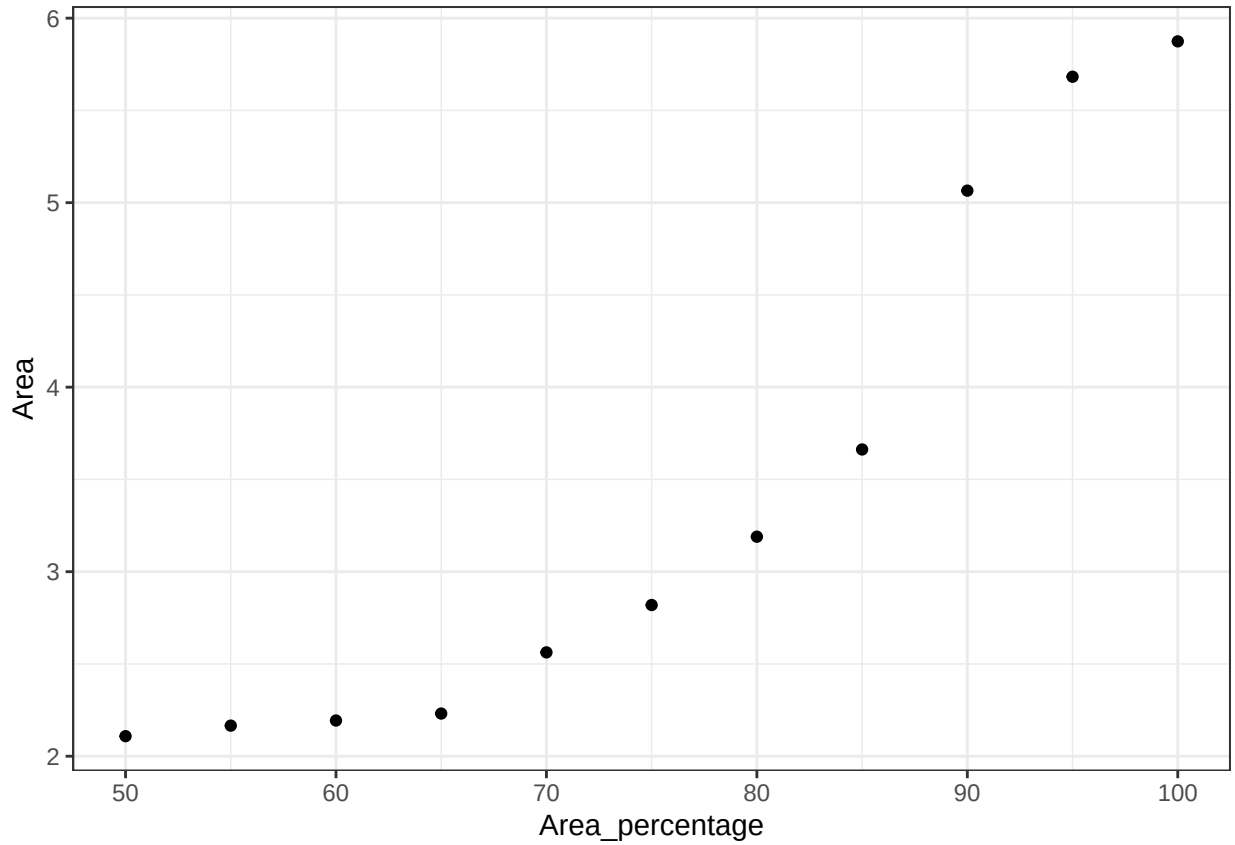
L3R1:

```
ggplot2::ggplot(L3R1, aes(Area_percentage, Area)) +
         geom_point() +
         theme_bw()
```



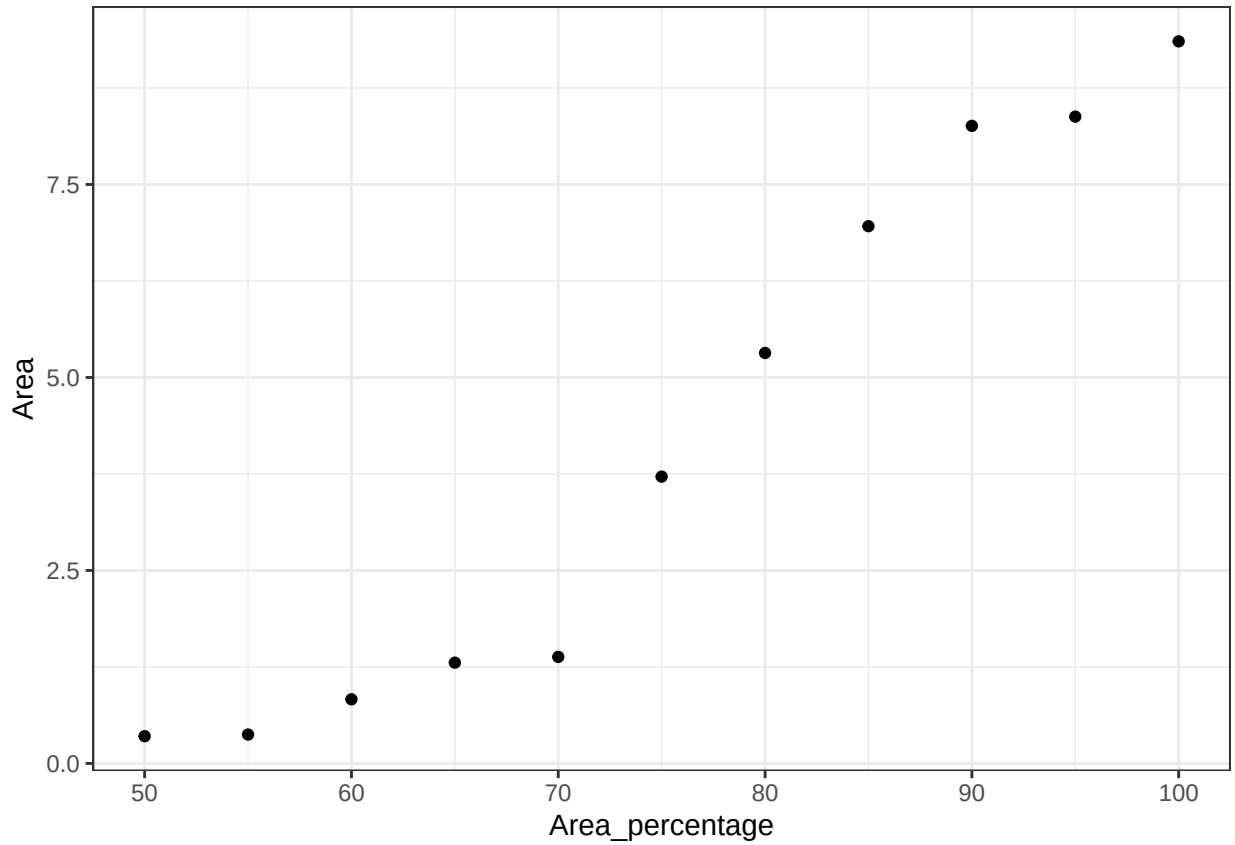
L3R3:

```
ggplot2::ggplot(L3R3, aes(Area_percentage, Area)) +
         geom_point() +
         theme_bw()
```



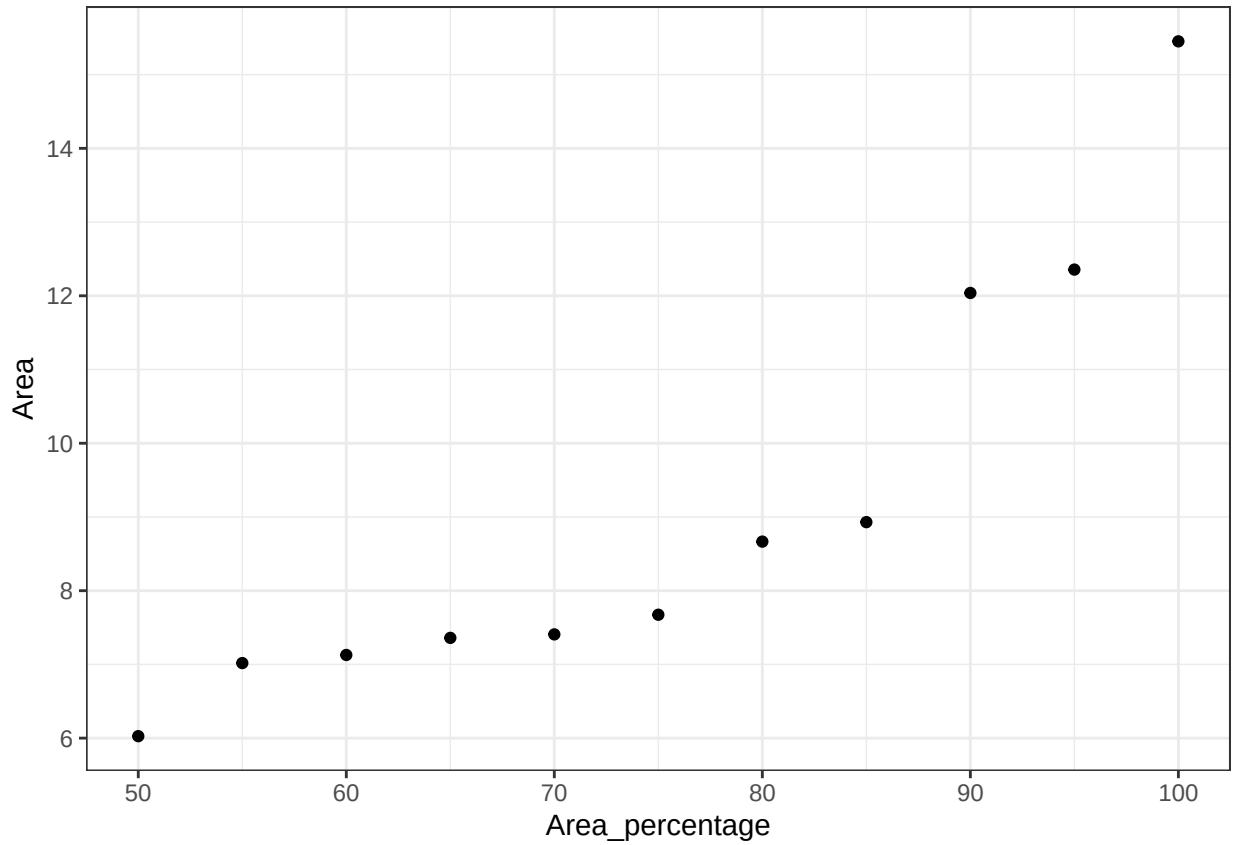
L3R9:

```
ggplot2::ggplot(L3R9, aes(Area_percentage, Area)) +
         geom_point() +
         theme_bw()
```



L9R0:

```
ggplot2::ggplot(L9R0, aes(Area_percentage, Area)) +
         geom_point() +
         theme_bw()
```



Set up a linear model

```
L1R2_lm <- lm(Area ~ Area_percentage, data = L1R2)
L1R4_lm <- lm(Area ~ Area_percentage, data = L1R4)
L3R1_lm <- lm(Area ~ Area_percentage, data = L3R1)
L3R3_lm <- lm(Area ~ Area_percentage, data = L3R3)
L3R9_lm <- lm(Area ~ Area_percentage, data = L3R9)
L9R0_lm <- lm(Area ~ Area_percentage, data = L9R0)
```

I'm not sure I get what this is testing. Area is the home range area , right? Are you trying to see how much different the 50% home range is to the 75% for example? If so, it might make sense to determine the difference in areas with each step and then compare the mean differences, rather than the areas themselves. Let's talk about this. Have you seen an example of this sort of analysis someplace?

Check the assumptions

```
autoplot(L1R2_lm, smooth.colour = NA)
```

```
## Warning: Removed 11 rows containing missing values (`geom_line()`).

Results: All individuals hava a homerange with a significant amount of variability (p = 0.00)

Question 3 Do female wood turtles occupy areas further from the stream than males do?

Check column names

```
names(turtles)
```

```
##  [1] "OID_"        "Date"        "Time"        "Latitude"    "Longitude"
##  [6] "Turtle_ID"   "Turtle_sex"  "Altitude"    "Duration"    "Temperature"
## [11] "Voltage"     "DOP"         "Satellites"  "EST_Time"    "NEAR_FID"
## [16] "NEAR_DIST"
```

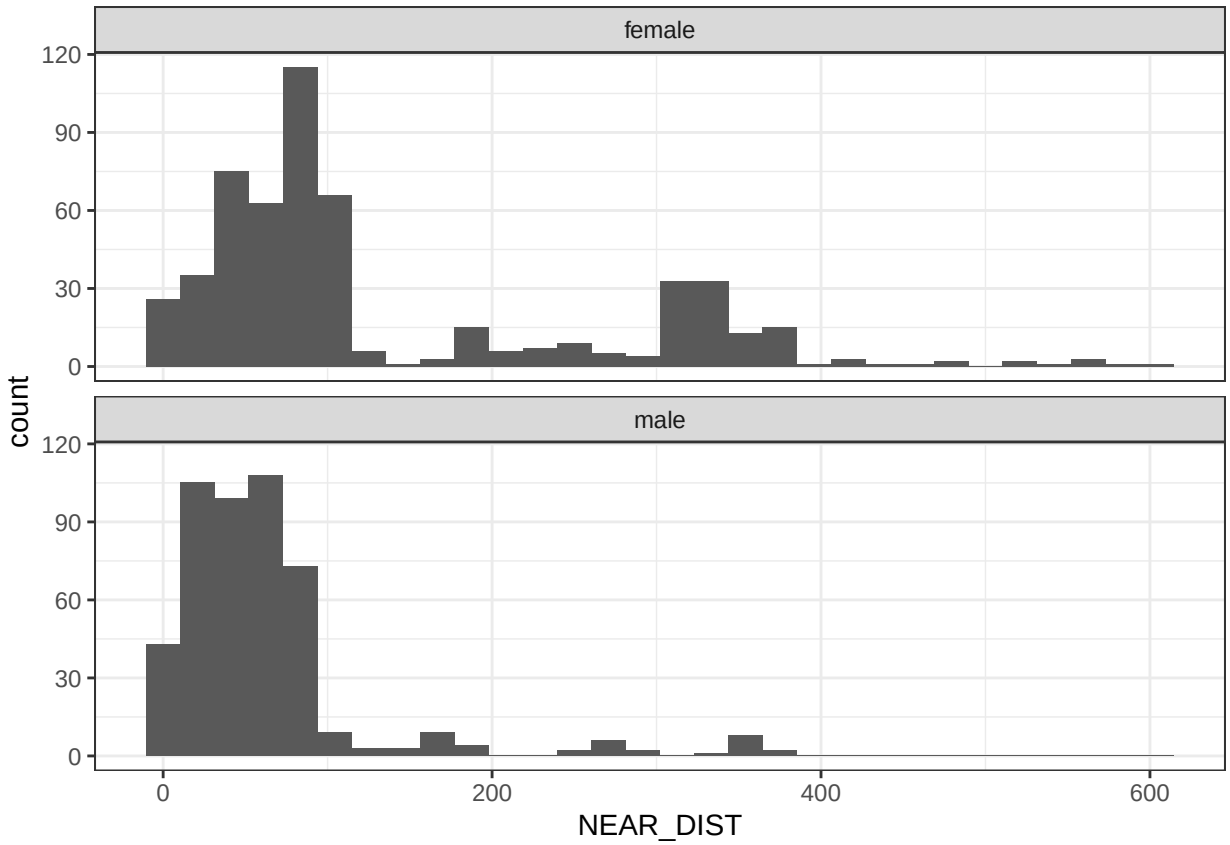
Create subset

```
df <- dplyr::select(turtles, Turtle_sex, NEAR_DIST)
```

Plot the relationship

```
ggplot(df, aes(NEAR_DIST))+
  geom_histogram() +
  facet_wrap(~Turtle_sex, ncol = 1) +
  theme_bw()
```

```
## `stat_bin()` using `bins = 30`. Pick better value with `binwidth`.
```



Summarise the data

```
turtlemeans <- summarise(
  group_by(df, Turtle_sex),
  meanNearDist = mean(NEAR_DIST))
```

Run ttest

```
turtle_ttest <- t.test(NEAR_DIST ~ Turtle_sex, data = df)
turtle_ttest
```

```
##
##  Welch Two Sample t-test
##
## data:  NEAR_DIST by Turtle_sex
## t = 12.246, df = 837.79, p-value < 2.2e-16
## alternative hypothesis: true difference in means between group female and group male is not equal to
## 95 percent confidence interval:
##  63.36131 87.54920
## sample estimates:
## mean in group female   mean in group male
##            138.44754             62.99229
```

There is a significant difference between the distance from the stream occupied by males vs females (n=6)(p=0.00)

Biological Summary

I found that there was not a significant difference between WHAT - between WHAT measure compared between males and females? the male and female wood turtles in this sample (n=6)(p=0.4756). This was different than my original hypothesis and therefore, I cannot reject the null hypothesis.

There was a significant difference in home range point variability for all individuals (n=6)(p=0.00). Instead of saying "there was a significant difference" which tells me some information, what about "Males had significantly larger home ranges than females" which tells me more.

Finally, there was a significant difference between the distance from the stream occupied by female turtles (mean = 138m) than male turtles (mean = 63m)(p=0.00). I can reject the null hypothesis. Again, tell me the difference. Males were found signfiicantly closer to streams than females...

Challenges

I needed to learn how to manipulate numeric values into usable coordinates for spatial data analyses. One challenge in this was learning how to project coordinates into UTM so that instead of having decimal degrees, I would be working with meters. This was important for calculating the areas of the MCPs and the distance the turtles were from the stream.

I think moving forward I would find a better test and angle to look at the home range variability question. I also need to troubleshoot and figure out why my code stopped providing 6 spatial polygons for the mcp (and therefore affected the rest of my code).

Ideally we'll fix this before the final version.

Learning about spatial data analysis has been a lot of fun because I am able to contrast the process with my GIS class and I am excited to implement these skills moving forwards in my studies and my career.

this has been a great project!
